

Upgrade operations for a Major upgrade

1. Prepare a USB disk, format to FAT32 before use.
2. Copy the .FUP file to the root directory of the USB disk, plug the USB disk in to the instrument.
3. Power off the instrument, then press and hold [STORE] + [M1] + [M3] and power on.
4. When you see the upgrade interface, release the buttons.
5. This is a major upgrade, please press the [Clean User] soft button in the screen to erase all user data inside the instrument. If you have any important user styles or other user data, please make sure you have had them all backed up before you do this.
6. After the user data has been cleaned, press the big button in the screen to start the upgrade.
7. Follow the screen display to install the new firmware.
8. The first boot up after you have cleaned the user flash, the screen will show a "Repairing" message, and will report an error 18 afterwards. This is normal, don't worry.
9. Please navigate to [Global Settings] -> [Utility] -> [Config3] -> [to Factory Preset], and uncheck the "but keep the memory data" box, then execute the reset.
10. All done.
